

# Towards a Dependability Control Center for Large Software Landscapes

Florian Fittkau, André van Hoorn, and Wilhelm Hasselbring

EDCC 2014 @ Newcastle upon Tyne, UK

2014-05-14

ExplorViz

- ▶ Dependability: manual management tedious in large systems (e.g., clouds)
- ▶ Automatic techniques proposed
- ▶ Operators often mistrust fully-automatic systems

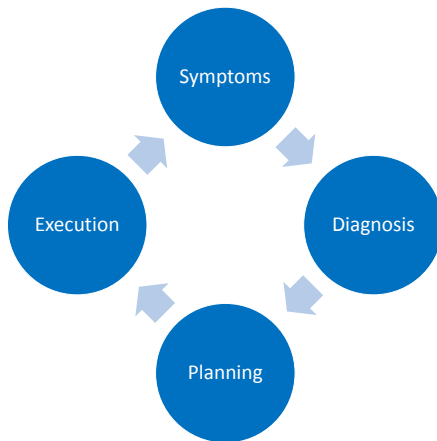

- ▶ Dependability: manual management tedious in large systems (e.g., clouds)
- ▶ Automatic techniques proposed
- ▶ Operators often mistrust fully-automatic systems
- ▶ **Vision: semi-automatic control center**

# ExplorViz

- ▶ Interactive approach for the live, explorable visualization of software landscapes [FWWH13]

► Four perspectives:

# 1. Phase: Symptoms

## Envisioned Control Center

# 2. Phase: Diagnosis

Envisioned Control Center

# 2. Phase: Diagnosis

Envisioned Control Center

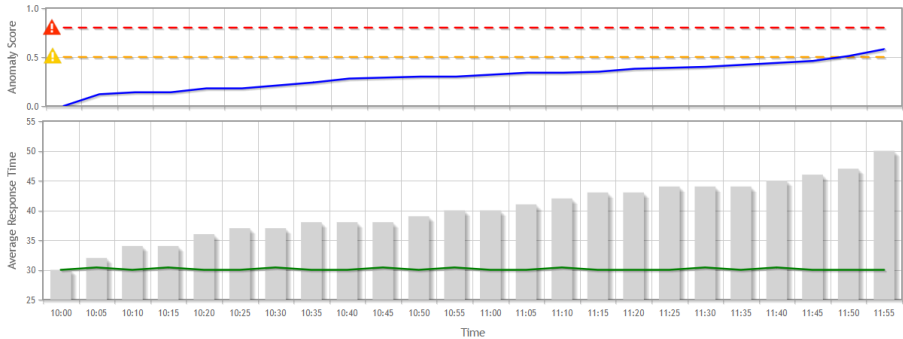

## 2. Phase: Diagnosis (cont'd)

### Envisioned Control Center

**Warning** ✕

The software landscape violates its requirements for response times.

**Countermeasure**

It is suggested to start a new node of type 'm1.small' with the application 'Neo4J' on it.

**Consequence**

After the change, the response time is improved and the operating costs increase by 5 Euro per hour.

Start the instance?

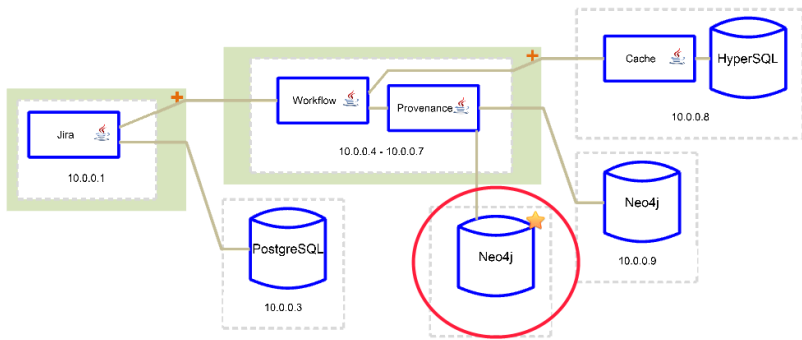

Automatic change dialog

# 3. Phase: Planning (cont'd)

### 3. Phase: Planning (cont'd)

Envisioned Control Center

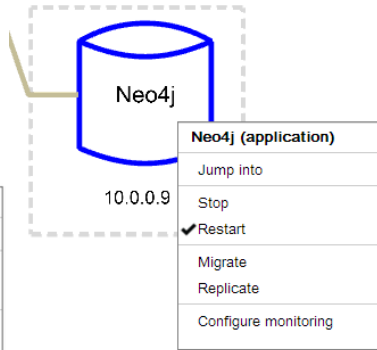

Node context menu

Application context menu

- ▶ Pushing execute button in the planning perspective
- ▶ Execution perspective is opened
- ▶ Shows **what is planned** and **what has already been conducted**

- ▶ Monitoring
  - ▶ Kieker [vHWH12]
- ▶ Online performance anomaly detection
  - ▶  $\Theta$ PAD [Bie12, Fro13]
- ▶ Root cause localization
  - ▶ RanCorr [MRvHH09]
- ▶ Online capacity management
  - ▶ SLAStic [vMvHH11]

- ▶ Cloud management
  - ▶ E.g., Amazon CloudWatch, Microsoft Azure auto-scaling
  - ▶ No manual refinement of the reconfiguration plan

- ▶ Cloud management
  - ▶ E.g., Amazon CloudWatch, Microsoft Azure auto-scaling
  - ▶ No manual refinement of the reconfiguration plan
- ▶ Application performance monitoring (APM)
  - ▶ E.g., AppDynamics, ExtraHop, or SPASS-meter [ES12]
  - ▶ Most tools only provide monitoring and reactive analysis

- ▶ Cloud management
  - ▶ E.g., Amazon CloudWatch, Microsoft Azure auto-scaling
  - ▶ No manual refinement of the reconfiguration plan
- ▶ Application performance monitoring (APM)
  - ▶ E.g., AppDynamics, ExtraHop, or SPASS-meter [ES12]
  - ▶ Most tools only provide monitoring and reactive analysis
- ▶ MAPE-K control loop tools
  - ▶ E.g., Rainbow [GCH<sup>+</sup>04] or TRAP
  - ▶ Large part focuses on automatic adaptation

## Summary

- ▶ Envisioned semi-automatic control center for cloud dependability basing on ExplorViz<sup>1</sup>
- ▶ Open source tool ExplorViz available at <http://explorviz.net>
- ▶ Visual plug-in-based integration platform for dependability management approaches

ExplorViz

---

## Summary

- ▶ Envisioned semi-automatic control center for cloud dependability basing on ExplorViz<sup>1</sup>
- ▶ Open source tool ExplorViz available at <http://explorviz.net>
- ▶ Visual plug-in-based integration platform for dependability management approaches

ExplorViz

## Future Work

- ▶ Provide an implementation for our control center concept
- ▶ Develop plug-ins to integrate a number of reasonable dependability management approaches

---
